**OVERVIEW**

docs	
tests	
package	

Phabricator for your terminal.

- Free software: Apache Software License 2.0

## 1.1 Installation

```
pip install phabcli
```

You can also install the in-development version with:

```
pip install https://github.com/alanbato/phabcli/archive/master.zip
```

## 1.2 Documentation

<https://phabcli.readthedocs.io/>

## 1.3 Development

To run all the tests run:

```
tox
```

Note, to combine the coverage data from all the tox environments run:

Win-dows	set PYTEST_ADDOPTS==cov-append tox
Other	PYTEST_ADDOPTS==cov-append tox

---

**CHAPTER  
TWO**

---

**INSTALLATION**

At the command line:

```
pip install phabcli
```

---

**CHAPTER  
THREE**

---

**USAGE**

To use phabcli in a project:

```
import phabcli
```

---

CHAPTER  
**FOUR**

---

**REFERENCE**

## 4.1 phabcli

## CONTRIBUTING

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

### 5.1 Bug reports

When [reporting a bug](#) please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

### 5.2 Documentation improvements

phabcli could always use more documentation, whether as part of the official phabcli docs, in docstrings, or even on the web in blog posts, articles, and such.

### 5.3 Feature requests and feedback

The best way to send feedback is to file an issue at <https://github.com/alanbato/phabcli/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that code contributions are welcome :)

## 5.4 Development

To set up *phabcli* for local development:

1. Fork [phabcli](#) (look for the “Fork” button).
2. Clone your fork locally:

```
git clone git@github.com:YOURGITHUBNAME/phabcli.git
```

3. Create a branch for local development:

```
git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you’re done making changes run all the checks and docs builder with [tox](#) one command:

```
tox
```

5. Commit your changes and push your branch to GitHub:

```
git add .  
git commit -m "Your detailed description of your changes."  
git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

### 5.4.1 Pull Request Guidelines

If you need some code review or feedback while you’re developing the code just make the pull request.

For merging, you should:

1. Include passing tests (run [tox](#)).
2. Update documentation when there’s new API, functionality etc.
3. Add a note to `CHANGELOG.rst` about the changes.
4. Add yourself to `AUTHORS.rst`.

### 5.4.2 Tips

To run a subset of tests:

```
tox -e envname -- pytest -k test_myfeature
```

To run all the test environments in *parallel*:

```
tox -p auto
```
